

CyberCom Internet Guest service solutions

Modern travellers have high expectations, and as a modern hotelier or tourism operator we understand how difficult it is for you to manage these expectations, especially when most of them involve a high level of technical expertise—that's not what you specialise in, you specialise in giving your guests what they want, we specialise in the technology to make that process easier.

We have a range of products that are available for the use of your guests, they do have another purpose though—they also make a consistent, positive contribution to your bottom line. After all, isn't that ultimately the only line that counts?

Many of our employees are ex hoteliers themselves, we understand the correlation between guest service and profits and we specialise in making both easier for you to deliver.

Be it Kiosks in your lobby, wireless access throughout your property or fully cabled wired access we can help. The best bit is that we pay the upfront installation costs and we maintain and service the equipment. We then split the revenue with you—so for no upfront cost, no service cost and no charge for access to the 24 hour freephone helpline for you or your guests you get to make an immediate and positive impact to your bottom line!

Don't delay, contact us today and talk to one of our dedicated account managers. Visit www.cybercomglobal.com or email info@cybercomglobal.com.
